## Smart Platform That Makes Smart Travelling Closer To Customers

Everybody loves traveling, once you arrive at a new place, you want to explore everything around and enjoy each minute of your vacation. But usually you have so much to see and so little time. Fat Tire Tours combines people who aspire to fill your trip with as many impressions & memories as it is possible by providing bike and Segway tours. And to make sure that they won't face any tech issues while following their mission, Fat Tire Tours has invited Code&Care to build additional features and help with localization. Currently, we are continuing ongoing support.

DIAL is a Call center solutions platform. They provide Cloud Phone Server, Broadcast Dialer and even Database Hosting. These services also give good analytics along with its high quality.

We built a dialer solution - it's a Voice broadcasting software. This platform includes: the creation of Voice and SMS campaigns, providing analytics for current and ready campaigns. Also, we made a good module structure for creation of polls/IVR modules for those used in campaigns, we built a CRM dashboard that makes management of the customers simpler. The latest implementation is an SMS portal that allows communication with the customers and makes manual or automatic replies.

### Team:

adlive.

Adlive is a technological solution intended for publishers and which allows them to improve the profitability of their inventory thanks to its transparent header bidding server.

We developed a script that allowed to automate the process of creation of the advertisements on the platform; they needed to have API for that purpose (for ex., Improve, Pubmatic, Rubicon). The script provided the next automated features: creating/deleting/editing ad slots on the SSPs, copying the IDs one by one on the adlive's adunit. Also, we implemented reporting on the platform and different video formats instream/outstream and native format.

EOS LAB is a Segregated Portfolio Company based on Grand Cayman Islands, established in 2018. Our focus is on research and development of innovative products supporting the EOSIO ecosystem, and products aiming to disrupt the status quo.

We created a full-stack application that integrated with EOS smart contract. EOS REX is a CPU and NET resource rental market in which holders of the core token of the blockchain can buy and sell slices of the REX pool in the form of REX tokens. Note that a REX token is not tradable with third parties, it is merely a convenient accounting unit that can only be directly bought and sold from and to the pool. Its value in terms of the core token always increases, but the return rate is determined by the level of rental activity.

MoxieGirl is an motivation planning platform for the teen girls. There are three types of users: a general user, an expert, and mentor. The key idea was that general user can set a goal, chat in groups or personally, share her results in social networks Instagram, TikTok and get primary access to the interviews of experts and their advice. Mentor can review, encourage and follow the user's goals through the app.

On the existing Moxie girl web app we added the opportunity to login/sign up via Instagram and phone number, ability to set new goals, profiles, dashboard, badged, Moxie leaders, integrated KWS (kids web services). Also, there were created wireframes before implementation. Now we continue working on the app and will implement the mobile app in the near future.

# GoodDollar

The GoodDollar experiment is a series of tests with the ultimate purpose of reducing wealth inequality through blockchain technology. Their mission is to build a new, global, open-source cryptocurrency – called GoodDollar – to distribute money using the principles of universal basic income (UBI). GoodDollar, a 100% not-for-profit project, is nurturing an ecosystem – including academics, NGOs, ethical investors, crypto supporters, and anyone who cares about reducing inequality.

Our main goal was to implement the architecture at AWS and configure it to arrange the high level of data persistence and synchronization between instances. Worked on the deployment of the project and its configuration on AWS Beanstalk, Elastic Block Storage and load testing of the GunDB. Apart from this, we handled the deployment of several services to the client's AWS as well as the configuration of the Fuse node with the creation of the different blockchain roles.

Jar House is a forward-thinking, non-traditional real estate brokerage. We partner with Najarian Capital, whose passion is bringing properties back to life, adding value to the community and being a part of fulfilling dreams as we turn houses into homes! Najarian Capital purchases an average of 75+ properties each month in more than 40 counties statewide. All of their properties are exclusively listed with Jar House, LLC. Our unique and progressive model sees each home through the full life cycle of a property. From acquisition through closing, everything is in-house. Here at Jar House, we believe that we should all find our inner greatness and use it to achieve extraordinary things.

Rework application from the EXPO framework to clean ReactNative application. Fixed following bugs from the legacy app version. Implemented brand new feature that allows storing completed answers in local DB while the network is disconnected and sends them automatically to the server on connection restored.

**FORSA Geld- und Kapitalmarkt GmbH** was founded as portfolio management and asset management company in the German area. FORSA provides the following services as mediating, investment advising, broker investments, investment management, third-country deposit brokerage, finance leasing, financial portfolio management.

We built from a scratch the first phase of a digital platform for managing investing sources by different roles as a bank representative, investor itself and consulting role as admin of the platform. There are three different interfaces for three role types with the grade of permissions handled both on the back-end and front-end sides. The admin role can follow the steps made by users on the platform and offer his help in case of any blockers. The team strongly participated in user stories creation and acceptance criteria discussion offering suggestions about client and back-end side work. The team worked according to Scrum methodology with all its artifacts and ceremonies.
