# book your.menu

# A System That Manages Reservations and Does Contact Tracing in Case of COVID-19 Outbreak

Guests visiting the canteen (or bistro) will use their phones or laptop to make reservations. Upon entering the canteen they will confirm their reservation by means of QR code. Canteen employees will be able to manage the capacity and opening times of a canteen. They can view statistics of how many guests have come and gone, and in the case of an outbreak they can get access to the guests' personal details to inform them.

The Code&Care team built platform from scratch. It contains of 3 applications with the common server: customer app, dashboard application and mobile check-in application.

### Beautifully-designed, PROVEN landing pages that convert

Our Smart Pages are battle-tested landing pages designed to produce greater conversion rates, which helps your client get more leads. We created the offers below so that agencies could leverage our results to land new clients.

Any Smart Pages purchase adds immediate value to any client within that industry. The case studies, ROI calculators, and social proof allow you to be perceived as an **expert** in the niche!

The templates themselves were designed to be easily edited so that they align to your client's branding while still hitting great conversion rates.

All brought to you by two names you can trust...

Live

### Beautifully-Designed, Proven Landing Pages That Convert

LPB creates smart pages that are battle-tested and designed to produce greater conversion rates, which helps clients get more leads.

A web application that works as a constructor of the landing pages with data tracking, monitoring of the users' actions. This tool is built for the IPPC team to create a new niche in cooperation with their clients. Managers are creating the landing pages for their clients, filling them in with the data, and assisting their clients with the data management.

## MVP: Powerful Management Tool for Tracking Your Trucks

National Carrier Exchange (NCE) is the way customers can get maximum value from their trucks.

NCE and Code&Care created the universal application that combines all required tools in one place. Showing the exact location of all the trucks, assigning them to work, monitoring the process starting with the pickup to delivery, providing live tracking numbers to the clients, sending invoices, updating instant electronic copies of the signed proof of delivery, all of these and even more were created by our team.

## Motivation Planning Platform for the Teen Girls

MoxieGirl is a motivation planning platform for teen girls. There are three types of users: general users, experts, and mentors. The key idea is to give users the opportunity to set a goal, chat in groups or personally, get primary access to interviews of experts and their advice, and share results on Instagram and TikTok. Mentors can review, encourage and follow the user's goals through the app.

On the existing Moxie girl web app we added the opportunity to login/sign up via Instagram and phone number, availability to set new goals, profiles, dashboard, badged, Moxie leaders, integrated KWS (kids web services). Also, there were created wireframes before implementation. We are continuing to work on the app and going to implement the mobile app in the near future.

## GoodDollar

#### New, Global, Open-Source Cryptocurrency

The GoodDollar experiment is a series of tests with the ultimate purpose of reducing wealth inequality through blockchain technology. Their mission is to build a new, global, open-source cryptocurrency – called GoodDollar – to distribute money using the principles of universal basic income (UBI). GoodDollar, a 100% not-for-profit project, is nurturing an ecosystem – including academics, NGOs, ethical investors, crypto supporters, and anyone who cares about reducing inequality.

Our main goal was to implement the architecture at AWS and configure it to arrange the high level of data persistence and synchronization between instances. Worked on the deployment of the project and its configuration on AWS Beanstalk, Elastic Block Storage, and load testing of the GunDB. Apart from this, we handled the deployment of several services to the client's AWS as well as the configuration of the Fuse node with the creation of the different blockchain roles.
